

Rapid Production, Straightforward Separation

PAPERplus® Classic CX

PAPERplus® Classic CX from Storopack Uses Blade-Free Technology to Produce Robust and Versatile Paper Cushions

Metzingen, April 2024. The new paper cushioning system PAPERplus® Classic CX from Storopack produces robust yet flexible paper cushions, which adapt to the shape of the shipping goods, providing optimum protection even for heavy goods within the box. Thanks to perforated paper, the individual cushions can be easily separated from each other, meaning that the machine does not need a blade. As such, users benefit from safe and ergonomic workflows. In addition, the operator can choose between three different speeds and various padding properties to further increase packing comfort. The PAPERplus® Classic CX is very fast and can be integrated easily in any packing station due to its compact design.

A Choice of Modes to Reflect Different Needs

PAPERplus Classic® CX is a practical and user-friendly system that enhances the packaging processes of manufacturers and shipping companies alike. The high-performance PAPERplus® Classic CX produces paper cushions in seconds at the packing station. Doing so is very simple, with users choosing to operate the machine via touch screen or foot pedal. A selection of modes enables flexible production; for instance, paper cushions can be stored up for later use or produced individually as and when required. The paper consumable can be delivered via pallet which enables extremely long usage periods. If all the paper has been used up, the system can be reloaded in just a few simple steps. Thanks to the quick and easy feeding of the continuous paper, the machine is immediately ready for use again.

Robust Paper Cushions for Optimum Protection

The paper cushions produced using PAPERplus® Classic CX are exceptionally robust and ideal for protecting goods in medium-sized and large shipping cartons from damage. They fill voids, are suitable for wrapping/cushioning products, and block and brace shipping goods within the box. For maximum product protection and more

efficient use of materials, the volume of the paper pads can be individually adjusted for each item being shipped.
